Required Data Fields

Field Name	Type	Description
Email	string	This is the user's email address. This will be the email address associated with the account. arrivia may or may not need to require that the user confirm their email address prior to entering. This would be discussed with your Account Manager prior to enabling the API.
Password	string	This wi 11 be the user's password. If arrivia is validating the password either via the arrivia login page or via the arrivia login token API, the user must create this password at the time of registration. If arrivia is not validating the password, then anything can be sent in this field.
FirstName	string	The primary user's first name.
LastName	string	The primary user's last name.
Address	string	The primary user's street address of residence. By default, this field is required. We may from time to time disable the requirement for particular platforms. This would need to be discussed with the Account Manager in order to be disabled.
City	string	The primary user's city of residence. By default, this field is required. We may from

		time to time disable the requirement for particular platforms. This would need to be discussed with the Account Manager in order to be disabled.
TwoletterCountryCode	string	The primary user's country of residence. By default, this field is required. We may from time to time disable the requirement for particular platforms. This would need to be discussed with the Account Manager in order to be disabled. *Valid country codes included below.
Phone	string	The primary user's main phone number. By default, this field is required. We may from time to time disable the requirement for particular platforms. This would need to be discussed with the Account Manager in order to be disabled.
ContractNumber	string	The Contract Number is the partner's ID for the member. This is the best way to ensure that both systems are always in sync. The field may or may not be required. This would also need to be discussed with the Account Manager on whether or not the Contract Number will be required.
UserAccountTypeID	integer	The User Account Type is only required if more than one account type is enabled for the platform. If only one account type is enabled, then the User Account Type is not required. *Full list of Account Types included below.
ReferringUserId	string	The Referring User ID is the arrivia user ID that corresponds to the member who has referred the guest pass user. This is only required if the platform is set up as a Guest Pass User program.

This API is to access the demo site in one step rather than two.
